- **68%** of participating families received at least one referral for services

Healthy Chicago is ... Physical Activity & Safe Play

- **33,697** participants at PlayStreets events
- **210** community PlayStreets events city-wide

Healthy Chicago is ... Healthy Homes

- **37,921** children tested for elevated blood lead levels
- **1,093** children who tested with elevated blood lead levels received follow-up case management care from CDPH nurses
- **746** homes inspected for lead and other health hazards
- **115** homes received lead remediation or abatement for other health hazards
- **43%** of the children who received follow-up care had blood levels fall below the action level within 6 months

Healthy Chicago is ... Community Health Care Success Stories

Supporting New Families

During a lactation support call, a nurse recognized a new mother needed urgent care. Recovering from a C-section, she was overwhelmed and had neglected her blood pressure medication. With a reading of 160/100, the nurse urged her to take her medication and go to the ER if needed. She was later admitted for postpartum pre-eclampsia, a serious but rare complication. At her Family Connects nurse follow-up visit, she tearfully thanked the nurse, believing the intervention saved her life.

Sexual Health

A 28-year-old new to Chicago visited a CDPH Sexual Health clinic for HIV and infection prevention care. She received a same-day medication refill, follow-up support, and unexpected help accessing gender-affirming care. Over three months, she received screenings, treatments, and medication management before transitioning to a partner clinic for long-term care and hormone therapy. On her last visit, she tearfully thanked the staff, saying she never wanted to leave. CDPH continues to check in, ensuring her ongoing health and support.

Vaccinations

Every Sunday, CDPH and two community partners offer free COVID and flu vaccines at the Swap-O-Rama flea market. This collaboration between Cimpar, Swap-O-Rama and CDPH brings essential care to a community heavily impacted by respiratory illness, offering a convenient, trusted space for those without adequate insurance. Since the program began, vaccines have been given weekly, helping to keep Chicago healthy.

As one of the biggest U.S. cities, Chicago must respond to public health challenges at the scope and scale of a state. CDPH leverages longstanding relationships with community, county, and state health partners to optimize resource and service allocation, break down programmatic silos, and prioritize communities most impacted by adverse health outcomes.

Chicago deserves sustained investment in disease prevention, health promotion and protection so that we can reduce premature mortality and strengthen the health of all Chicagoans.
