I. INTRODUCTION

When people think of public health, many still think of local governmental public health agencies. But a successful approach to public health requires the identification and engagement of all partners - traditional and new - that contribute to the health the community. Consistent with this systems approach, the Chicago Department of Public Health (CDPH) looks beyond its own operations to gain a better understanding and monitor the efforts of other agencies and organizations that deliver public health services. One partner of particular importance is Chicago's hospital system. With their large investment in health care services, these institutions play a significant role in citywide efforts to improve the health of Chicagoans. Indeed, a CDPH analysis of 2001 data revealed that while safety net providers (community health centers and publicly-operated clinics) accounted for just 10% of ambulatory primary care services that year, Chicago hospitals collectively delivered 30% of outpatient primary care.

This report, *Chicago Hospital Profile, 1999-2003*, is the most recent product of CDPH's *Health & Health Systems Capacity Project* which routinely tracks and reports on Chicago's local health care system. The *Profile* is a descriptive report of changes in Chicago hospitals over a five-year period. Data are presented on general measures, selected procedures, and patient payer source. In addition to the narrative report, the *Profile* includes an aggregate and individual profiles of each hospital during this period.

Also available through the *Health & Health Systems Capacity Project* are profiles of the health and health systems serving each of Chicago's 77 formally designated communities. These profiles are available on the CDPH website (www.cityofchicago.org/Health/profiles) as are profiles of Chicago hospitals, as well as a select few that are suburban-based yet serve large numbers of Chicagoans. In addition to the web-based profiles, the Project periodically issues special reports on areas of interest to the public health community, policymakers, and other stakeholders.

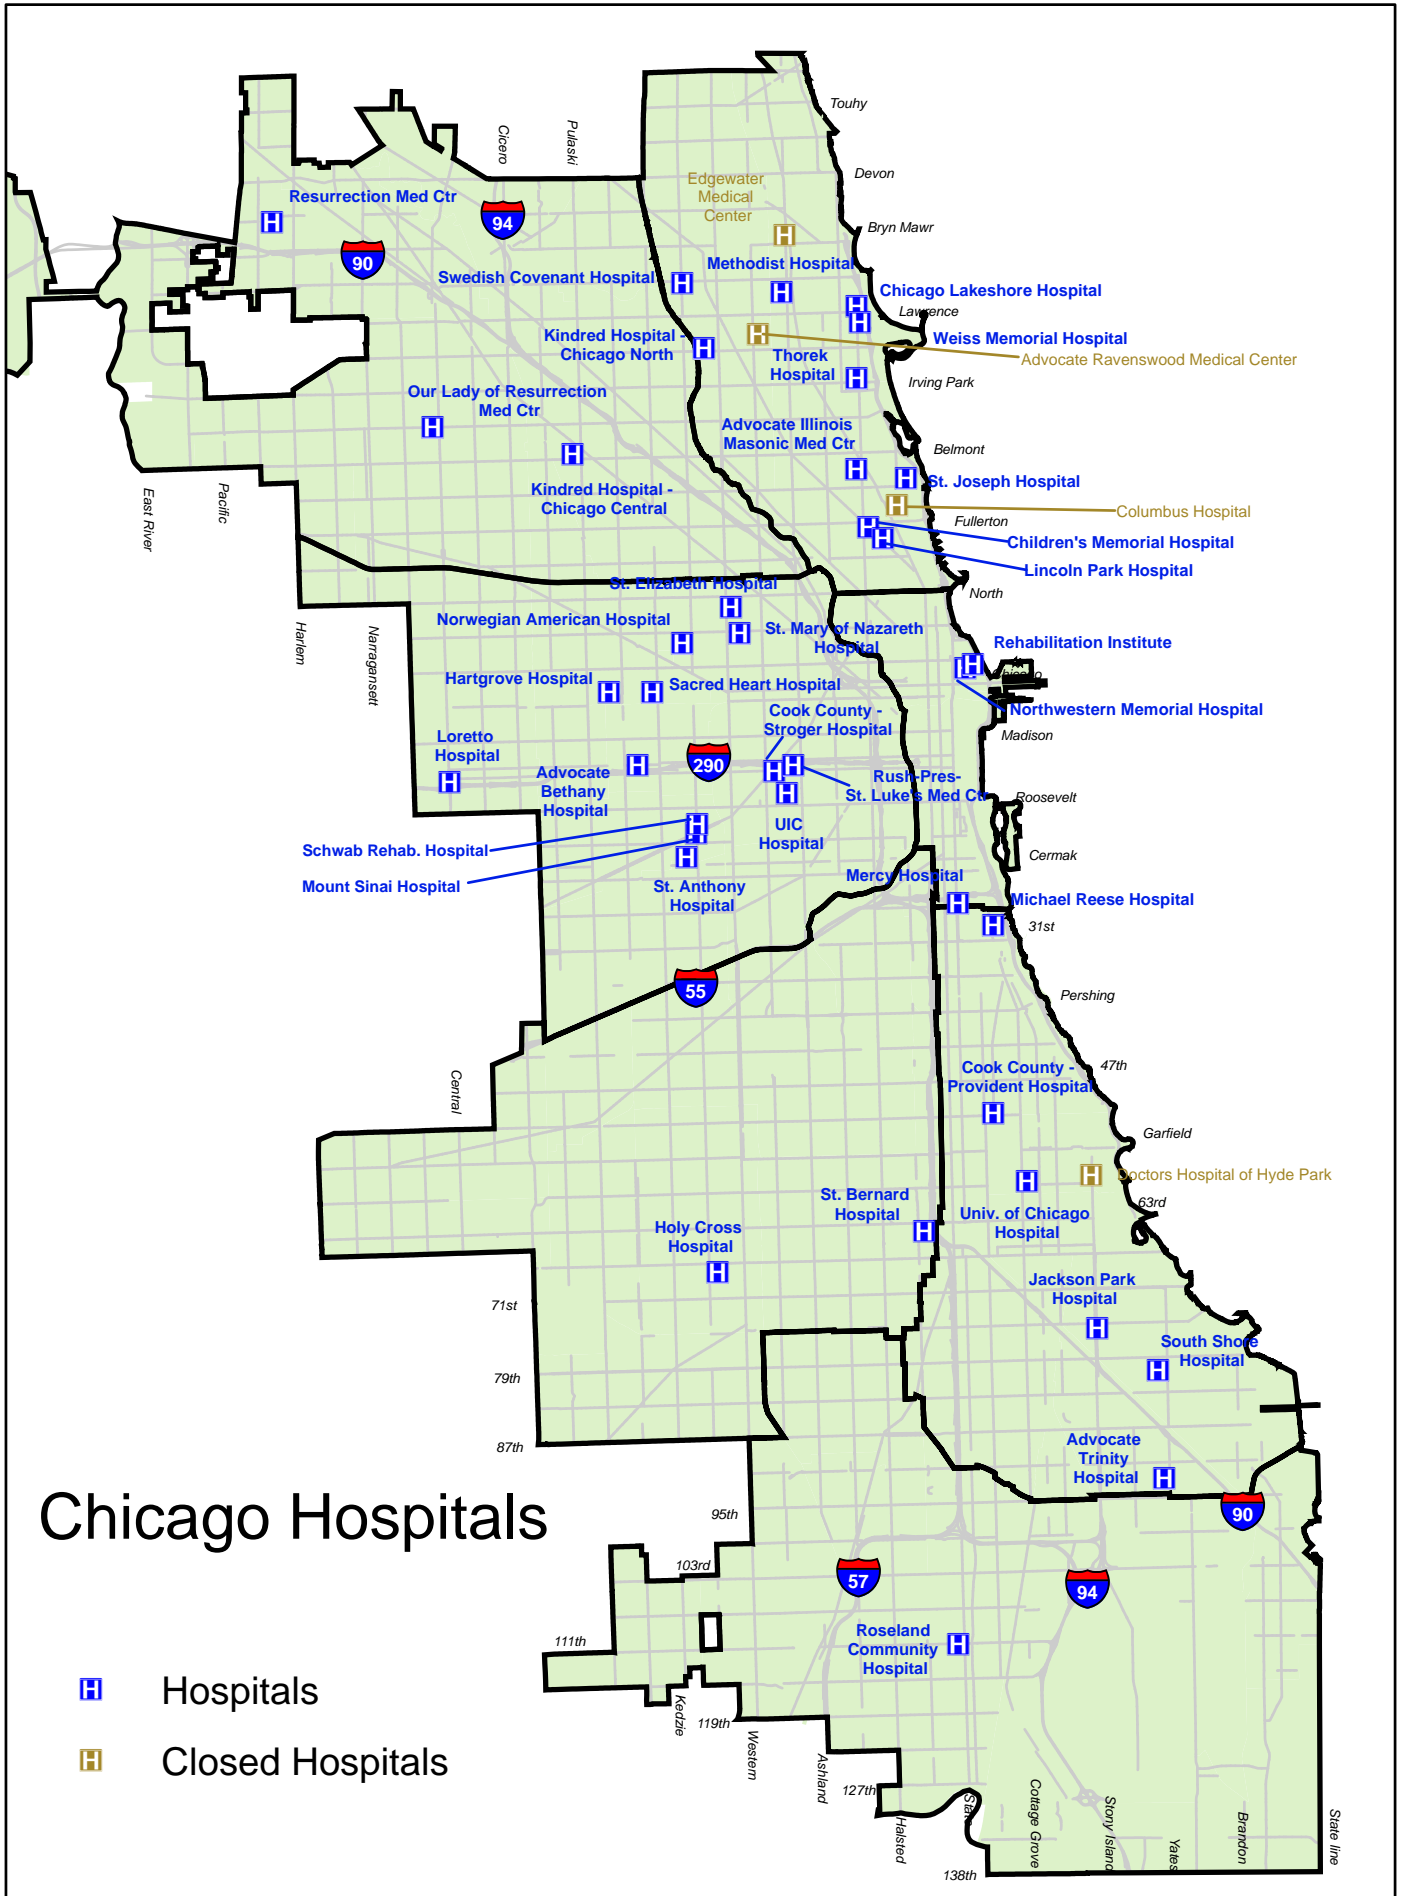

Methods: This report is based on data provided by hospitals to the Illinois Department of Public Health (IDPH) in response to the Department's Annual Hospital Questionnaire (AHQ). The AHQ is a state survey that collects information on yearly hospital utilization, patient demographics, and medical technology. All acute care hospitals licensed in the State of Illinois are surveyed, although this report focuses only on those based in Chicago. Hospitals that treat the chronically ill, such as Chicago Shriners, and federal facilities are not surveyed. The data and analyses presented in this report reflect the responses of individual hospitals as reported to and presented by IDPH.

Unless otherwise noted, the changes noted in the narrative are based on absolute numbers rather than percent changes. Overall decreases noted on indicators between 1999 and 2003 include the loss of services due to hospital closures. However, when determining the leading hospitals experiencing decreases for each indicator, the closed hospitals are not included.

Organization of the Report: The report is organized into six sections, including this Introduction. Section II briefly describes the broad changes in hospital operations that occurred between 1999 and 2003. Sections III to V address changes in general measures, changes in selected procedures, and changes in payor sources, respectively. Section VI summarizes key findings. Appendices include: definition of terms, hospital comparison reports for selected measures, and citywide and individual hospital profiles.

II. HOSPITAL CLOSURES AND OTHER TRANSITIONS

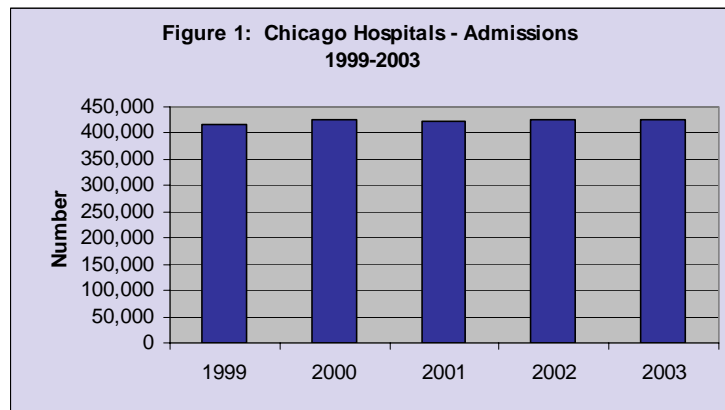

With the closing of Doctors Hospital of Hyde Park in 2000 and the 2001 closures of Columbus Hospital, Edgewater Medical Center and Advocate Ravenswood Hospital, the number of Chicago hospitals declined from 42 to 38 between 1999 and 2003. While Doctors Hospital did not respond to the 1999 Annual Hospital Questionnaire (and thus is not counted in this report), the other three hospitals accounted for 22,000 admissions that year. Also during this period, Grant Hospital became Lincoln Park Hospital while Cook County Hospital relocated and became John H. Stroger, Jr. Hospital of Cook County. Map 1 displays the 42 Chicago hospitals open in 1999, noting the four closures.

III. CHANGES IN GENERAL MEASURES, 1999 TO 2003

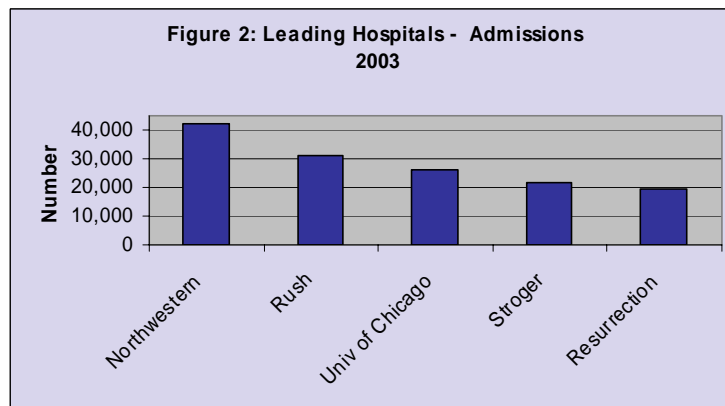

Hospital Admissions

Chicago hospital admissions increased slightly from 416,691 to 427,109, or 2.5%, between 1999 and 2003 (Figure 1). The greatest increase occurred between 1999 and 2000 with minor fluctuations in subsequent years. Twenty-eight hospitals saw an increase in the number of admissions. Those experiencing the greatest increases were Northwestern Memorial Hospital (+11,695 or 38.1%), Rush-Presbyterian- St. Luke's (+4,561 or 17.2%), and Swedish Covenant (+4,065 or 32.8%).

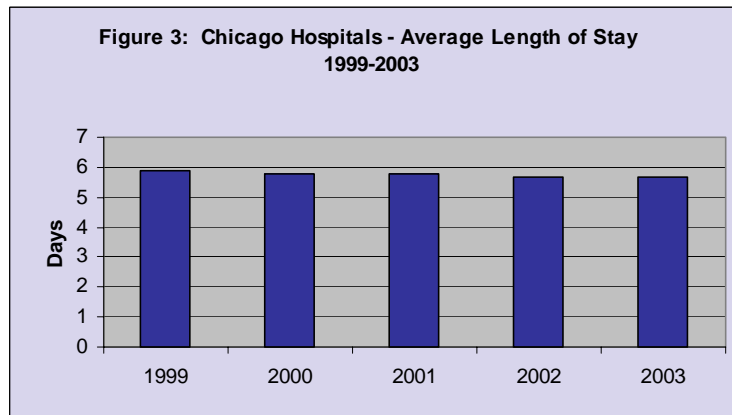

Ten hospitals had fewer admissions in 2003 compared to 1999. The largest decreases, in absolute numbers, were Holy Cross (-2,626 or 19.1%), Stroger Cook County (-2,462 or 10.2%) and Mercy Hospital and Medical Center (-2,060 or 12.5%).

Five hospitals accounted for nearly one-third (32.8%) of 2003 hospital admissions in Chicago. These hospitals are shown in Figure 2.

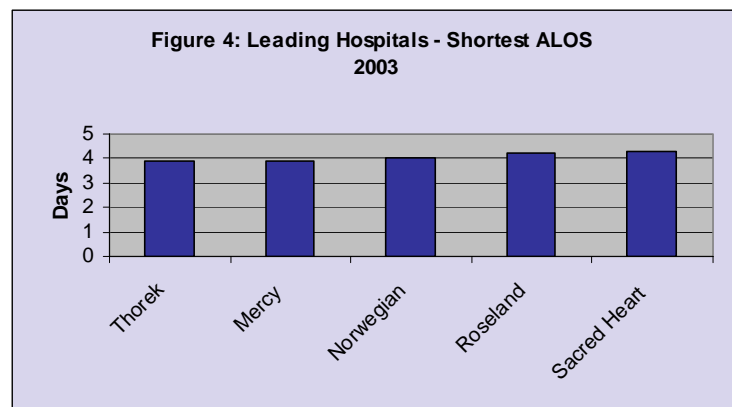

Average Length of Stay

The Average Length-of-Stay (ALOS) for persons admitted to Chicago hospitals decreased slightly between 1999 and 2003, from 5.9 days to 5.7 days, a drop of 3.4% (Figure 3). Eleven hospitals reported increases in ALOS, with the greatest percent increase seen at Advocate Bethany Hospital where stays rose by 25.6% from 3.9 to 4.9 days. The next largest increases occurred at Saint Mary of Nazareth (11.8% from 5.1 to 5.7 days) and South Shore Hospital (7.8% from 5.1 to 5.5 days).

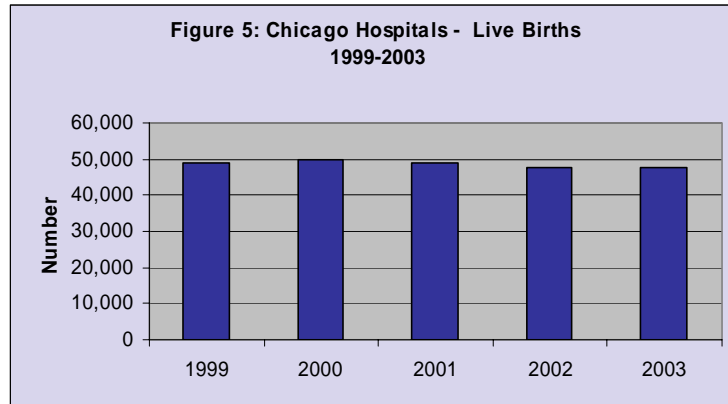

The majority of hospitals, 27, showed decreases in the ALOS between 1999 and 2003, consistent with national trends. This is thought to be primarily due to financial pressures on hospitals to lower lengths-of-stay. The greatest percent decreases in ALOS during this time period occurred at Schwab Rehabilitation Hospital, which due to the nature of the patients served has longer lengths of stay than general acute care hospitals. The ALOS at Schwab decreased by 31% from 23.2 to 16 days. Among acute care hospitals, notable decreases were seen at Thorek Hospital (-25% from 5.2 to 3.9 days) and Lincoln Park Hospital (formerly Grant) (-22.7% from 6.6 to 5.1 days). The five hospitals with the shortest ALOS in 2003 are reflected in Figure 4.

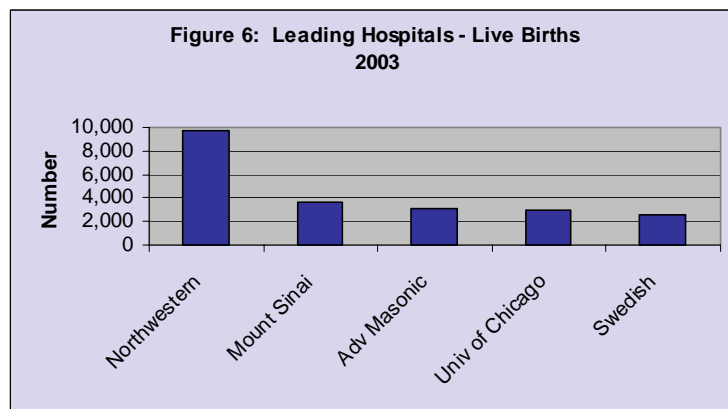

Live Births

Between 1999 and 2003, the number of live births reported at Chicago hospitals decreased slightly from 48,920 to 47,762, a drop of 2.4% (Figure 5).

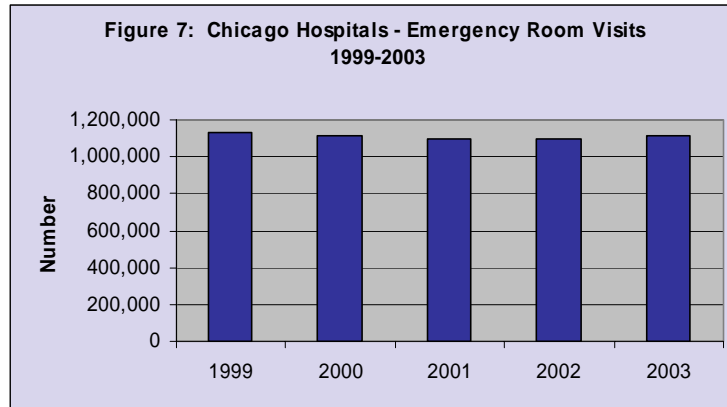

Of the 25 hospitals reporting deliveries in 1999, all but five declined or stayed substantially the same, with increases of less than 5%. This suggests that fewer hospitals are accounting for more of the deliveries. Indeed, in 2003 five hospitals accounted for 46% of all live births at Chicago hospitals (Figure 6). Notably, over 20% of live births occurred at Northwestern Memorial, where the number of births increased by 2,801 or 40%. Northwestern Memorial accounted for 14% of live births at Chicago hospitals in 1999. In addition to Northwestern, the most notable increases were seen at Swedish Covenant (+895 or 54.9%) and Louis Weiss (+364 or 72.9%).

The hospitals with the largest decreases in the number of live births were Mercy Hospital and Medical Center (-794 or 30.5%), Advocate Illinois Masonic (-703 or 18.4%) and Stroger Cook County (-523 or 28.8%).

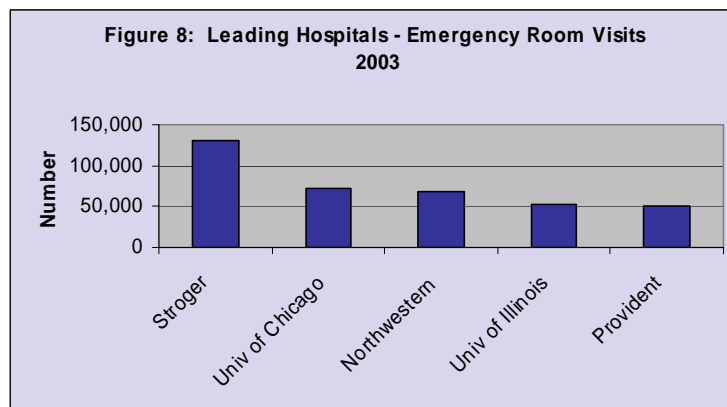

Emergency Room Visits

Emergency room visits decreased slightly between 1999 and 2003, from 1,128,962 to 1,112,858, a drop of only 1.4% (Figure 7). Emergency room visits increased at 21 hospitals. The greatest increases occurred at Northwestern Memorial (+11,486 or 20.3%), University of Chicago Hospital (+9,401 or 15.2%), and Jackson Park Hospital (+8,810 or 57.7%).

Among the 13 hospitals where the number of emergency room visits declined, the greatest decrease was seen at Stroger Cook County (-18,324 or 12.4%). The other public hospital, Provident, also showed a decrease in visits (-6,478 or 11.3%). Consistent with their declines in admissions and live births, decreases in emergency room visits were also seen at Holy Cross (-8,797 or 17.3%) and Michael Reese Hospital and Medical Center (-6,750 or 22.6%).

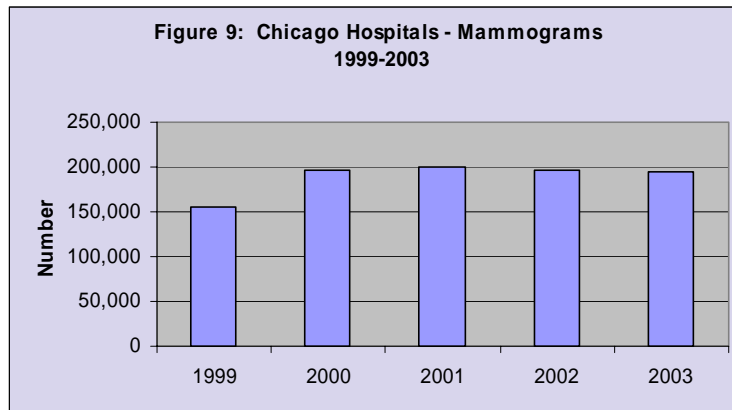

As reflected in Figure 8, five hospitals accounted for just over one-third (33.5%) of emergency room visits to all Chicago hospitals in 2003.

IV. CHANGES IN PROCEDURES, 1999 TO 2003

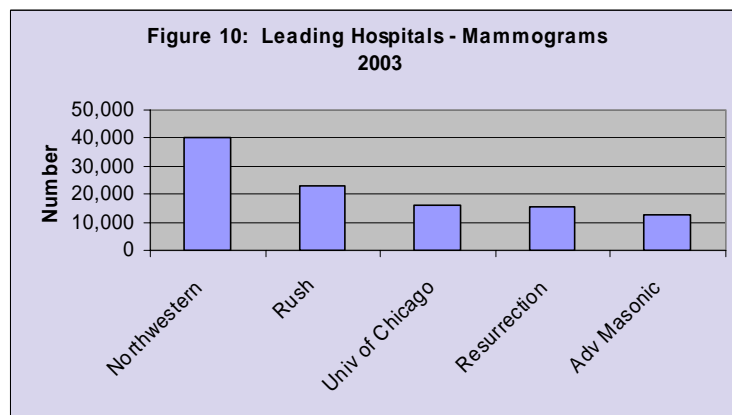

Mammograms

The number of mammograms conducted at Chicago hospitals increased substantially between 1999 and 2003, from 155,093 to 194,139, an increase of 25.2% (Figure 9). However, perhaps up to half of this increase may be attributed to Rush-Presbyterian-St. Luke’s Medical Center apparently not reporting mammograms for 1999. The hospital reported over 20,000 mammograms for each of the years between 2000 and 2003.

The number of mammograms provided increased at 20 Chicago hospitals during this period. The greatest increases (based on absolute numbers and not counting Rush) occurred at Northwestern Memorial (+11,524 or 39.8%), University of Chicago (+6,009 or 58.8%), Advocate Trinity (+2,224 or 36.5%), and Advocate Illinois Masonic (+2,224 or 21.8%). Decreases, reported by 11 hospitals, were greatest at the University of Illinois at Chicago Hospital where mammograms declined by 3,324 or 46.3%. Other decreases were seen at Mercy Hospital and Medical Center (-1,367 or 15.1%), and Holy Cross (-1,093 or 25.2%).

Five hospitals accounted for over half (55.5%) of all mammograms provided at Chicago hospitals in 2003 (Figure 10). Notably, Northwestern Memorial Hospital accounted for one-fifth of total mammograms.

Surgeries

Between 2000 and 2003, the combined number of inpatient and outpatient surgeries performed at Chicago hospitals decreased from 226,210 to 206,048, a drop of 8.9% (Figure 11). IDPH did not report surgeries for 1999. Of the 17 hospitals where the number of surgeries increased, the greatest growth was seen at Advocate Trinity (+3,247 or 63.8%), Northwestern Memorial (+2,987 or 11.9%), and the University of Chicago Hospital (+2,059 or 11.6%). Among the 17 hospitals where the number of surgeries declined, the greatest decreases occurred at Mercy Hospital and Medical Center (-3,025 or 24.1%), Mount Sinai (-3,024 or 32.0%), and the University of Illinois Hospital (-2,570 or 24.3%).

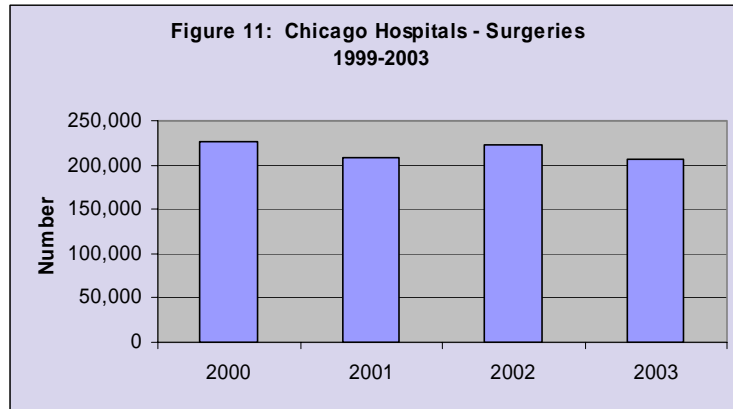

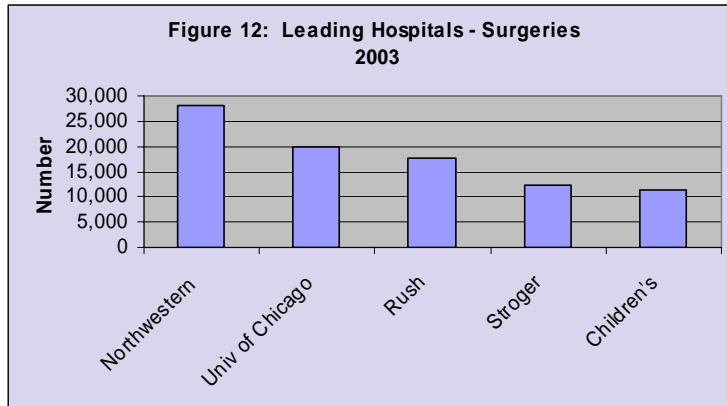

Figure 12 reflects the five hospitals reporting the largest number of surgeries in 2003. Collectively, these hospitals accounted for 43.3% of all surgeries performed that year at Chicago hospitals.

CAT Scans

The number of CAT scans performed at Chicago hospitals increased dramatically between 1999 and 2003, from 311,962 to 479,431, an increase of 53.7% (Figure 13). The majority of hospitals showed increases in the number of CAT scans of at least 25%. The greatest increases, in absolute numbers, were seen at Northwestern Memorial (+56,329 or 142.1%), Rush-Presbyterian-St. Luke's (+20,201 or 174.1%), and Stroger Cook County (+17,980 or 77.4%). Only three hospitals showed decreases in CAT scans between 1999 and 2003. The greatest and most notable decrease occurred at St. Bernard Hospital where CAT scans declined from 2,526 to only 474 during this period, a reduction of 81.2%. The next greatest decrease was seen at Holy Cross (-1,647 or 13%).

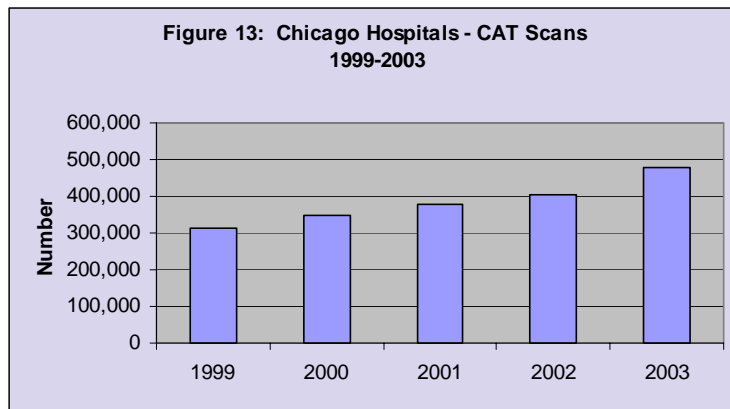

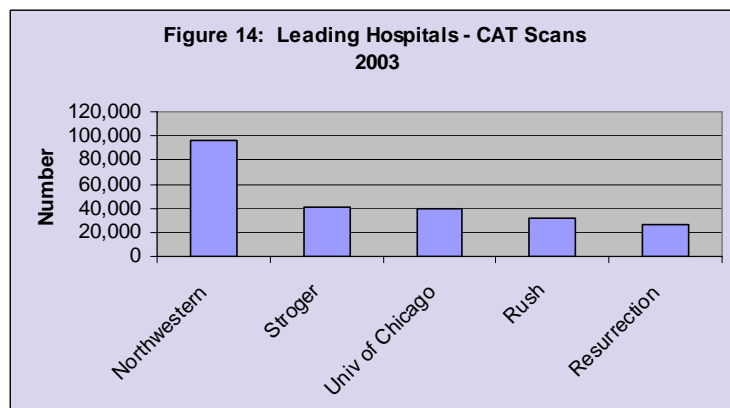

Figure 14 shows the five Chicago hospitals that performed the greatest number of CAT scans in 2003. Nearly half (49%) of all CAT scans were conducted at these five hospitals. One-fifth of all CAT scans were performed at Northwestern Memorial that year; Northwestern accounted for just under 13% of such procedures in 1999.

MRI Scans

Like CAT scans, MRI scans increased dramatically between 1999 and 2003, from 67,875 to 121,925, an increase of 79.6% (Figure 15). The majority of hospitals showed increases in the number of MRI scans of at least 50%. As with most other measures, Northwestern had a dramatic increase in MRI scans, up 23,369 or 181.4% during this five-year period. The other hospitals with the largest increases were Rush-Presbyterian-St. Luke's (+7,058 or 238.7%) and University of Chicago (+4,227 or 63.2%). Only two hospitals performed fewer MRI scans in 2003 than in 1999: Michael Reese Hospital and Medical Center (-702 or 34.9%) and Lincoln Park (formerly Grant) (-161 or 29.5%).

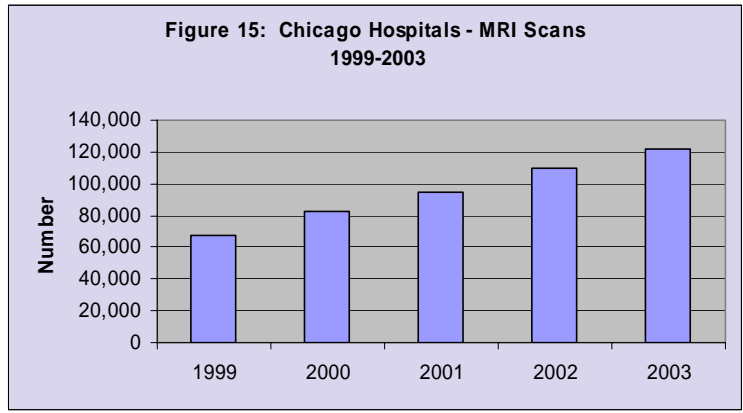

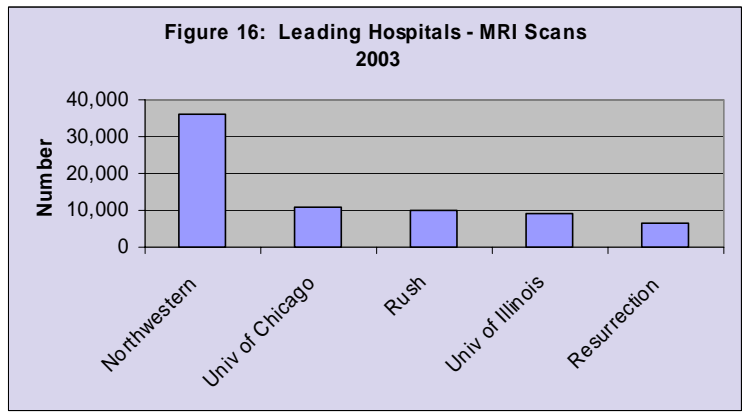

Figure 16 shows the five Chicago hospitals that performed the greatest number of MRI scans in 2003. Collectively, these five sites accounted for 59.5% of all MRI scans citywide. Notably, 30% of such procedures citywide were attributable to Northwestern Memorial Hospital, which accounted for less than 19% of MRI scans five years earlier.

V. CHANGES IN PAYOR SOURCE, 1999 TO 2003

Percent Medicaid

The percentage of hospital inpatients on Medicaid increased slightly between 1999 and 2003, from 30.2% to 32.6%, an absolute increase of 2.4% (Figure 17). Of the 24 hospitals reporting an increase in the percent of patients on Medicaid, those with the greatest absolute increase were Sacred Heart (41.0%), Thorek (27.2%), and Lincoln Park (formerly Grant) (26.3%). These three hospitals accounted for very few total admissions, collectively only 4.1% of all admissions, so these increases are relatively insignificant for the system overall, although they may be significant for the individual hospitals. Of the 14 hospitals reporting a decline in the proportion of patients covered by Medicaid, the greatest absolute decreases were seen at Jackson Park (-11.4%), Roseland (-9.0%), and Michael Reese (-8.2%).

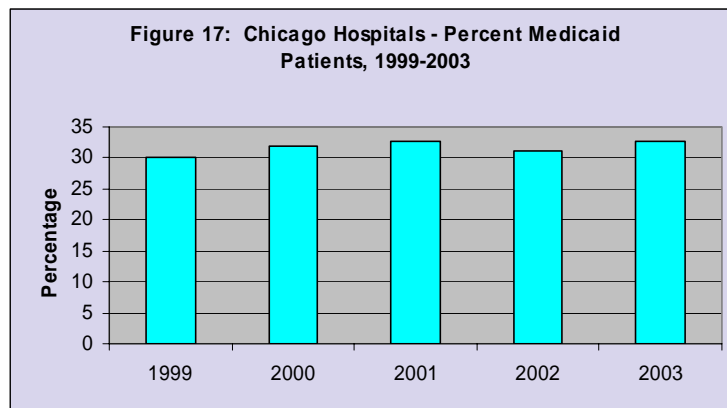

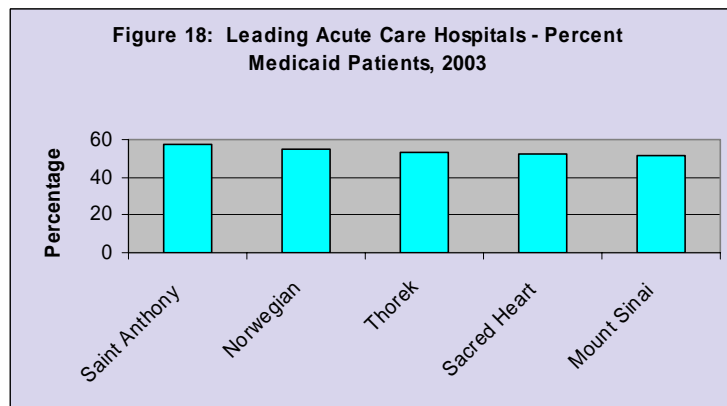

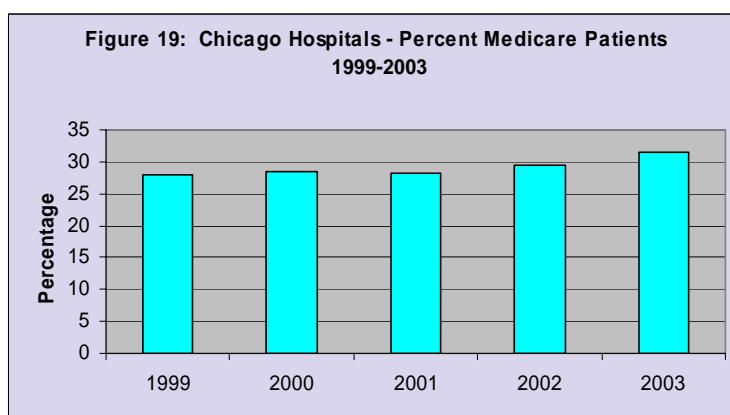

Figure 18 shows the five Chicago acute care hospitals with the greatest percentage of Medicaid inpatients in 2003.

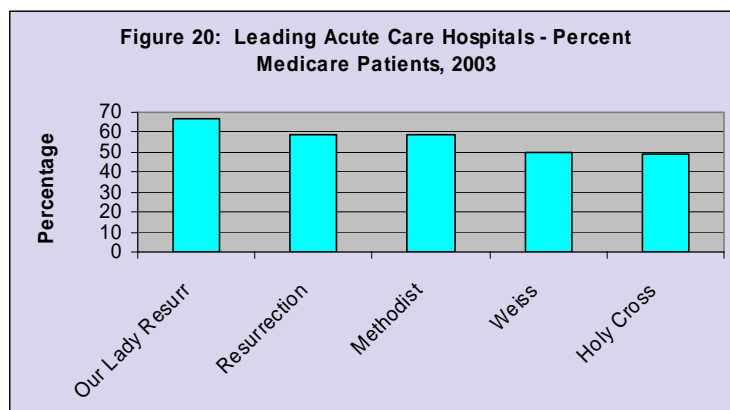

Percent Medicare

The percentage of inpatients supported by Medicare increased modestly between 1999 and 2003, from 27.9% to 31.4%, an absolute increase of 3.5% (Figure 19). Increases were reported by 24 hospitals, with the greatest absolute increases reported by Holy Cross (48.6%), Lincoln Park (formerly Grant) (29.7%), and St. Bernard (14.7%). As with Medicaid, the hospitals reporting the greatest increases in proportion of Medicare patients accounted for very few total admissions, thus while perhaps significant for the individual institutions, these increases are relatively insignificant for the system overall. Decreases in the percent of patients on Medicare were reported by 14 hospitals, the greatest seen at Sacred Heart (-21.7%), Thorek (-14.1%), and Chicago Lakeshore (-9.8%).

The five Chicago acute care hospitals reporting the greatest percentage of Medicare inpatients in 2003 are reflected in Figure 20.

Percent Insurance (Commercial)

In 2003, admissions for patients with commercial insurance accounted for over one-quarter of all admissions to Chicago hospitals, 27.8% (Figure 21). This reflects an absolute decrease of 2.8% from 1999 when 30.6% of inpatients had insurance. Fourteen hospitals reported an increase in patients covered by insurance. The greatest absolute increases were reported by Lincoln Park (formerly Grant) (20.8%), Michael Reese Hospital and Medical Center (16.2%), and Roseland Hospital (14.9%).

Among the 24 hospitals which reported a decrease in the number of commercially insured patients, those with the greatest absolute decreases included the Rehabilitation Institute (-34.6%), Mount Sinai (-28.2%), and Mercy Hospital and Medical Center (-18.6%).

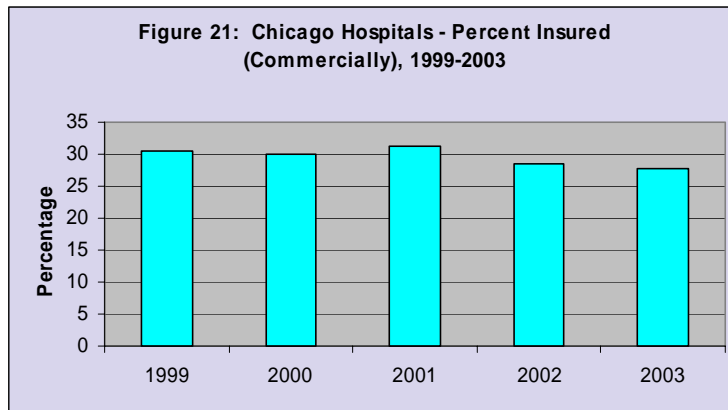

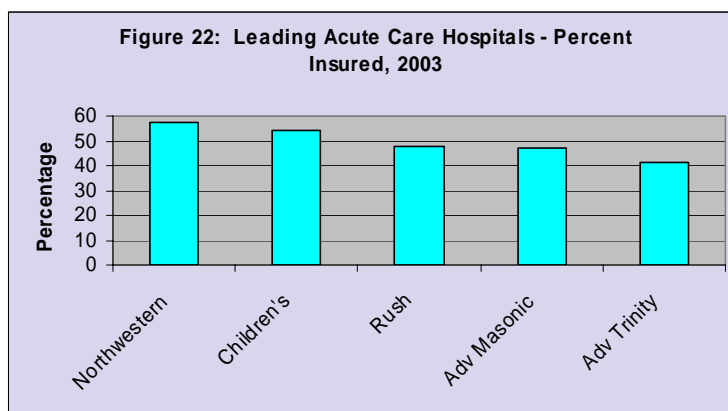

Figure 22 presents the five Chicago acute care hospitals with the greatest proportion of commercially insured patients in 2003.

VI. SUMMARY

Significant Hospital Trends: While several hospitals experienced changes in the five years between 1999 and 2003, undoubtedly the most dramatic changes occurred at Northwestern Memorial Hospital. Though it has been a major force among Chicago hospitals for many years, this dominance grew dramatically during this five-year period. Admissions were up 38%, live births by 40%, mammograms 40%, CAT Scans 142%, and MRI Scans by 181%. In addition, Northwestern Memorial has ranked number one for all volume indicators (e.g., admissions, live births, surgeries, mammograms) except for emergency room visits (though even for this measure it had the greatest increase). Among the 38 hospitals in Chicago in 2003, Northwestern accounted for 10% of admissions, 20% of live births, 21% of mammograms, 20% of CAT scans, and 30% of MRI scans. While many hospitals experienced expansion in one or more areas, the only one besides Northwestern to stand out is Swedish Covenant Hospital. Among all hospitals, its ranking went from 14th to 8th for admissions, 15th to 5th for live births, and 20th to 13th for emergency room visits. For procedures its ranking remained substantially the same. Based on total admissions, the other dominant hospitals in Chicago (following Northwestern) are Rush-Presbyterian-St Luke's Medical Center, the University of Chicago Hospital, John H. Stroger, Jr. Hospital of Cook County, and Resurrection Medical Center.

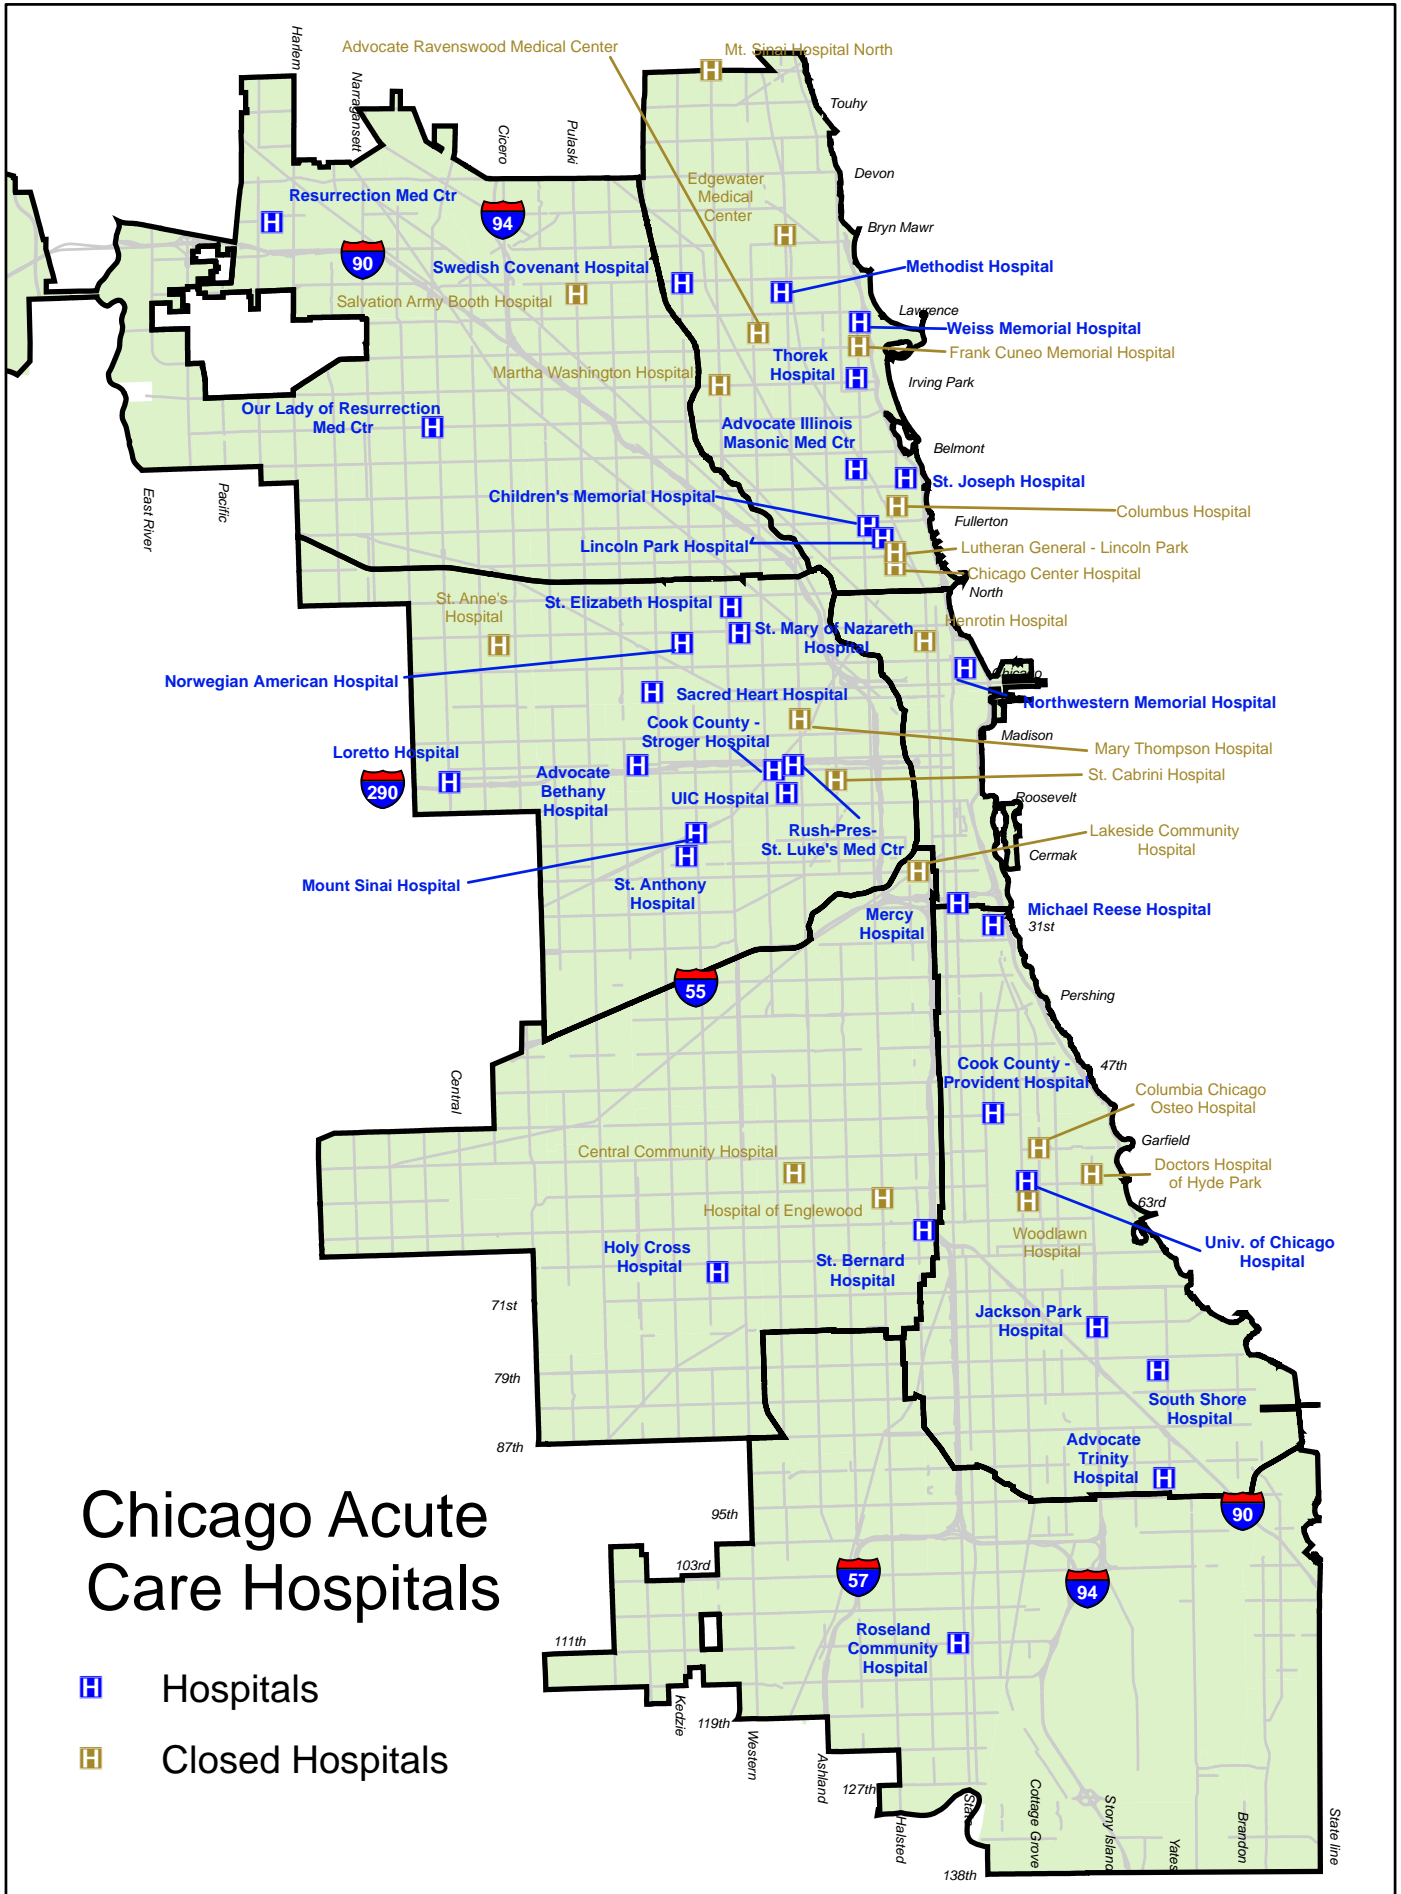

Significant volume decreases for admissions, live births, and emergency room visits have occurred at several hospitals (not including the ones that closed). The most significant decreases were seen at Holy Cross Hospital, Mercy Hospital and Medical Center, Stroger Cook County, and Methodist Hospital of Chicago.

Significant Indicator Findings: As previously noted, for Chicago hospitals overall, live births declined by 2.4% from 1999 to 2003. However, the share of live births for the top five hospitals in Chicago increased from 41% to 46%. This increased concentration of live births is primarily due to the dramatic increase for Northwestern. As noted above, in 2003 Northwestern alone accounted for 20% of all live births at Chicago hospitals. The next highest was Mount Sinai Hospital, with 8% of live births. Interestingly, of the hospitals in the top 10, only Northwestern and Swedish Covenant showed significant growth in the number of live births. The rest declined or stayed substantially the same.

The other notable volume indicator finding was the dramatic increase in procedures, particularly CAT and MRI scans. CAT scans increased by 53.7% and MRI scans by 79.6%.

Payor Analysis: With increases in the proportion of admissions covered by Medicaid and Medicare between 1999 and 2003, these two government-funded programs accounted for nearly two-thirds of all admissions (64%) in 2003. Commercially insured patients accounted for 28% of admissions. Several hospitals had dramatically higher percentages of patients with commercial insurance in 2003 than in 1999.

Regional Analysis: A geographic analysis of hospital closings suggests a pattern that deserves some comment. Map 2 shows the distribution of open and closed acute care hospitals since 1980. Four hospitals closed during the period of this analysis, 1999 to 2003: Edgewater Medical Center, Advocate Ravenswood, Columbus Hospital, and Doctors Hospital of Hyde Park. All four were located in areas with a high concentration of existing hospitals. Based on examination of Map 1, these four closings are consistent with a trend that appears to have been going on since at least 1980 in which most closings are occurring in those areas with the highest concentration of hospitals. The net effect of this is a more even distribution of hospitals throughout the city (relative to 1980). This can be seen most clearly with the substantial decrease in the number of hospitals on the city's south side straddling 55th Street and along the North lakefront. The main exception to this appears to be the West side. Although there have been some hospital closings in this area, notably Mary Thompson Hospital and St. Cabrini, a substantial concentration remains, even after excluding the public hospital, Stroger. However, the recent merger of St. Elizabeth's and Saint Mary's may indicate that further consolidation in this area is occurring. The area with the lowest concentration of hospitals is the Southwest side. This is particularly noteworthy as the only hospital in this area is Holy Cross, one of the hospitals in Chicago showing notable declines in numbers between 1999 and 2003. Though not part of this analysis, an analysis of nearby Southwest suburban hospitals might shed light on this finding.

Appendices

Appendix A - Definition of Terms

Appendix B - Hospital Comparison Reports for Selected Measures

General Measures

- Admissions
- Average Length of Stay
- Live Births
- Emergency Room Visits

Procedures

- Mammograms
- Surgeries
- CAT Scans
- MRI Scans

Payor Source

- Percent Medicaid
- Percent Medicare
- Percent Insurance (Commercial)

Appendix C - Hospital Profile Trend Reports

- Individual hospital reports
- Totals for all Chicago hospitals

APPENDIX A - DEFINITION OF TERMS

Admissions: The number of patients accepted for inpatient service during a 12-month period. Patients that were admitted more than once during the year are counted separately for each admission. Newborns are not included

Average Daily Census: The average number of staffed beds that are occupied each day. The average daily census is calculated by dividing the total inpatient days by 365 days.

Average Length of Stay (ALOS): The average number of days each patients stayed. The ALOS is calculated by dividing the total inpatient days by the total admissions.

Emergency Room Visits: The number of visits seeking medical assistance from the hospital's emergency department. This number may include multiple visits from the same patients.

Licensed Beds: The maximum bed capacity approved by the Illinois Health Facilities Planning Board. Inventoried beds are approved by category of service.

Live Births: The annual number of surviving births delivered at the hospital.

Payment Source

- **Charity Care:** Care for which the provider does not expect to receive payment from the patient or a third-party payor.
- **Insurance:** Care which is covered by individual or group private health insurance.
- **Medicaid:** A jointly-funded, state and federal government, insurance program that pays for medically necessary services. Medicaid pays for medical services for children and their caretakers, pregnant women, and persons who are disabled, blind or 65 years of age or older who can demonstrate a need through income and assets standards. In Illinois, Medicaid is administered by the Department of Health Care and Family Services (previously the Department of Public Aid). Medicaid funds physicians, hospitals and long term care.
- **Medicare:** A health insurance program for people 65 years of age and older, some disabled people under 65 years of age, and people with End-Stage Renal Disease (permanent kidney failure treated with dialysis or a transplant). The Medicare program is administered by the Federal government.
- **Other Public:** Includes all forms of direct public payment excluding Medicaid and Medicaid.
- **Private Pay:** Includes payment from a private account and any government funding made out and paid to the resident which is then transferred to the facility to pay for services.

Staffed Beds: Of the number of licensed beds, the number which are staffed and available for use. The number presented reflects the peak number of beds at any one time for the year.
